

## **Perineal ultrasound 16/03/2023**

Investigation compared with the previous similar one of 16-09. 2020: the presence is confirmed of anecogenous cystic image of m.8 mm associated with hyperechogenic pun\i1orme calcific, located on the right side at the site corresponding to the Cowper's gland and referable to inflammation. Also of note is the presence of paraurethral "clod" calcifications, more evident on the right at the urethral tract.

correspondence of the prostatic urethra tract from the outcome of prostatovesiculitis.

No alterations of the corpora cavernosa and the corpus spongiosum of the urethra are reported, while there are on the right, some fibrotic calcific images of the deep tonaca lining the corpora cavernosa at the level of the root of the penis.
