SPECIAL ULTRASOUND DIAGNOSTICS

Date: 16 09.2020

PELVIC FLOOR examination

Patient: PIZZARELLA ANTONIO

REPORT

Examination performed with a 5.4 linear and 12 Mhz probe with perineal approach (between the anus and the scrotum): in the space between the anal margin and the root of the scrotum there is a round hypo-anechogenic formation of about 1.8 m in diameter, closely adjacent to the root of the lower margin of the spongiosum of the urethra, the elective site of the pain reported by the patient, hypothetically referable to phlogosis of the Cowper's gland. Concomitant vascular ectasia of the right prepuce circle. specialist urological examination and possible further diagnostics would be useful

Dr. Vittorio Piloni

Radiodiagnostics specialist
